

Yellowstone National Park never ceases to amaze. I have had the opportunity to visit Yellowstone many times in my life and I am always in awe of its natural wonders.

A honeymoon vacation in Yellowstone National Park will not disappoint the honeymoon couple

that is searching for an awe inspiring experience with nature.

Arriving into Yellowstone via the southern route through the Grand Tetons is incredibly beautiful. What most tourists do not realize is that they are also entering the caldera of an ancient yet active volcano. Our first stop on this visit to in the park was West Thumb geyser basin on the edge Yellowstone Lake. When you stand on the south edge of the West Thumb geyser basin and peer into the clear water of the lake you are actually looking into a smaller submerged volcano caldera.

Besides having more geysers then any place in the world Yellowstone hosts abundant waterfalls, boiling mud pots, hot springs , inspiring vistas & is a sanctuary for many species such as grizzly bears, buffalo, elk, pronghorn, wolves etc..

Romantic accommodations also abound for honeymooners from the grand Lake Lodge, to the 100 year old, Old Faithful Inn & the newly renovated Old Faithful Lodge to less expensive cabins. A honeymoon in the USA can be hot!!

This has been a great road trip!! Call me today for more honeymoon and destination wedding ideas.
